Case Study: Campaign Performance Evaluation

Context

Salomon recently completed a marketing campaign across all channels to support the launch of a new footwear franchise.

Following the campaign, **senior leadership has asked for an evaluation of overall eCommerce performance** and to **provide recommendations for future campaigns**.

You have access to summarized reporting from the following functions:

- Merchandising (sales & product performance)
- CRM (Email & SMS)
- Paid Media
- Affiliate Marketing
- Site Merchandising
- Consumer Services
- Consumer Database

No single report tells the full story. **Your objective is to determine whether the campaign was successful, identify the primary drivers of performance, and recommend what the business should do next.**

Objective

Prepare a **30–45-minute executive presentation** for the North America eCommerce leadership team.

Your presentation should answer:

1. Was the campaign successful?
 2. What evidence supports your conclusion?
 3. What were the biggest drivers of success or underperformance?
 4. What additional questions or analyses would you pursue?
 5. What three recommendations do you have for future campaigns?
-

Deliverable

You may use slides or another presentation format.

Assume the audience consists of leaders across omni-channel Merchandising, Growth and Brand Marketing, eCommerce, and Consumer Services.

Focus on:

- Synthesizing information across functions
 - Identifying meaningful insights
 - Communicating recommendations clearly
 - Explaining your reasoning
-

Scenario Variable

The information provided by cross-functional reporting stakeholders may be incomplete or contain conflicting signals. Where appropriate, explain what additional data you would seek and how it would influence your recommendations.

Evaluation Criteria

1. How you structure your thinking
2. How you present your concepts – what is your presence and how you can tailor technical concepts for a non-technical audience.
